

BINDER WHT 210

Description

acrylic polymer and wax emulsion

Specifications

Appearance	white creamy emulsion
Total solids (%)	24±1
pH	8-9

Employment Field

BINDER WHT 210 is a compact product based on acrylic, wax and a novel technology of matting polymers designed specifically for white and pastel colour leathers finishing systems. It is studied to achieve base coat finishing with very high degree of coverage, uniformity and extreme softness without overloading the grain. Thanks to its white film and to its excellent fastness to heat and light yellowing, its is particularly indicated for finishing of light colour such as corrected grain flat or pre-embossed leather for upholstery.
