Employment Field

COVER ROLL F is a high viscous product designed to hiding leather surface defects such as scratches, thorn marks and brands. The application of this particular product is by rollercoat and could be done before buffing or in between two buffing operation.

The result is a very smooth surface ready to be finished for embossed type of leather .

COVER ROLL F key features are excellent adhesion and print retention while maintaining elasticity and easy buffing .

It is used to produce embossed corrected grain leather on buffalo or cow for upholstery and leather goods.
