

BINDER 855

Description

ANIONIC PRE-BOTTOM

Specifications

Appearance	White creamy
pH (dil. 1:10)	8,0-10,0
Total solids (%)	22%

Employment Field

BINDER 855 is an anionic compound product developed as a pre-bottom coat for corrected grain and full grain leather. It is generally diluted with water in order to adjust viscosity and to regulate add on and it is applied by spray or roller and develop his best properties when polished.

Binder 855 composition includes an adhesion promoter type of polyurethane thus it gives excellent adhesion providing better adhesion on second coat.
