

DULL HE-16

Description

EMULSION OF MATTING AGENTS

Specifications

Appearance	Whitish
Active matter (%)	17,0 +/- 1,0 %
pH	9.0-10.5
Viscosity	200-1000 cPs

Employment Fiel

DULL HE-16 is an extremely efficient matting agent, it does not form films and thus does not compromise the softness of the finish.

Given its matting capacity, it is also used for aqueous base coats and top coats, whenever a matt effect is required.

For use, we recommend mixing DULL HE-16 with water and mixing well before adding the remaining components.
