

WAX TOP 22 F

Description

Emulsion of synthetic and natural waxes.

Specifications

Appearance *hazel-brown fluid*

Dry residue (%) *40 ± 2*

pH *4,5 ± 0,5*

Charge *non ionic*

Employment Field

WAX TOP 22 F is an emulsion with high performance, very stable, based on natural and synthetic waxes, medium soft. Added in the polishable prebottoms, it improves the reactivity of the mixtures producing a better masking and polishing effect. WAX TOP 22 F reduces the stickiness of the polymeric binder films

It is currently used, diluted with water, in order to obtain darkening effects on aniline skins, whereas applied alone it is suggested for pull-up effects, without adding any oil.
