

WAX TOP 462

Description

emulsion of hard waxes

Specifications

Appearance Yellowish liquid

pH (dil. 1:10) 4,0 – 6,0

Dry residue (%) 18 %

Charge anionic

Employment Field

WAX TOP 462 is a non-ionic emulsion of hard waxes for finishing both full -grain and corrected grain leathers, to attain particular darkening and aging effects.

It is generally used diluted at 1:0.5 to 1:1 with water, and spray-applied, allowing the achievement of darkened effect following milling operations.

Used in combination with other auxiliaries in pre-bottoming coats, it will encourage a contrasting effect in the grain following drawing and then drumming, thus giving a very pleasant and natural look.
