

RM 2511

Description

REOLOGY MODIFIER

Specifications

<i>Appearance</i>	<i>hazy liquid</i>
<i>Total solids (%)</i>	<i>18 – 20 %</i>
<i>Charge</i>	<i>Non ionic</i>
<i>Viscosity</i>	<i>2000 - 5000 cPs</i>

Employment Fiel

RM-2510 is a non-ionic associative thickener used as rheology modifier for water based systems studied also to improve levelling and film build up on spraying application. It is a very effective and develops his thickening power independently from pH value of water emulsions . Percentage of use are variable in function of temperature and viscosity profile required , dilute the product 1: 1 in water to facilitate dispersion. Stir very well mixes after addition of RM 2511.
