

TOP RT CONC

Description

crosslinker

Specifications

Appearance *Yellowish liquid*

Total solids (%) *100*

Employment Field

TOP RT CONC Is a polyfunctional crosslinking agent for acrylics, proteic products and PUD polymer in water dispersion. It crosslinks finishing mix at room temperature resulting in higher characteristics of wet rub , flexes and resistant to chemical agents.

It is generally used adding 1-3% directly in finishing mix providing good agitation.

After the addition finishing mix should be used within the next 12 hours in order to avoid hydrolysis and loss of crosslinking power.
