

## PX 17 MATT

---

### Description

---

### Specifications

|                  |                    |
|------------------|--------------------|
| Appearance       | White milky liquid |
| Total solids (%) | 18,0 – 20,0 %      |
| pH               | 8,0-9,0            |
| Viscosity        | < 1000 cPs         |

---

### Employment Fiel

*PX 17 Matt is an aqueous dispersion of special polyurethane polymers with the particular characteristic of forming very matt films, studied as finishing component for top coat of high performance leathers items such as automotive segment. It is generally used as matting agent in those top coat finishing formulations achieving a particular low degree of gloss while maintaining transparency and pleasant surface feel. Formulation based on PX 17 Matt are providing dull coating which also results in very low tendency to re-polishing .*
